VIEWS YOU CAN USE

Thomas Engelmann
Head of Energy Transition
KGAL Investment Management

We are on the edge of a complete transformation – one that requires us to rethink our industries.

For example, the steel industry has never used hydrogen. The cement industry is the same. These hard-to-decarbonize industries are the key to unlocking a major hydrogen economy. Moving forward, we need a certain kind of stimulation in the early stages – this is where subsidies come into play. But we do not want to stick with subsidies for long because it is simply not sustainable. We need to bring green hydrogen to a whole new status and, in the interim, we need the support of subsidies within a specified timeframe. ■
